

A Database Administrator (DBA) for the cause

Which one ? Yours !

The proposition

1. The proposition is simple, I'm offering my services as Database Administrator to proceed with analysis for how many databases we can proceed for a day.
2. In exchange, I ask the company that receive my services to **give a donation to a charity organization of their choice** for **800\$ or more** before I do the job. *Hopefully more, let's not forget tax credit for donation that one can ask ;-)*
3. At the end of the day, the company will have tangible, professional analysis results of your databases that you'll be able to keep, visualize and use it how you see fit.

Pre-screening you may want to do

- View the db analyzer short video to illustrate the flow(s) from configuration to result
refer to documentation kit index urls
- Browse analysis reporter sample(s) project(s)
refer to documentation kit index urls
- Read the db-analyser presentation kit for details of what will be provided
refer to documentation kit index urls
- Read the db-analyzer use case scenario to get the vision on the aspect where this could
refer to documentation kit index urls

All those piece of information will help you understand different aspects of what will be provided so you can decide if you want to go ahead and do some good too.

*Ubuntu :
I am, because you are*
