db-analyzer

(META, DATA, SCHEMA, SAMPLER)

v1.8

Who am I?

- My name is Ricardo Da Fonseca, I am and have been a Database Administrator / Data architect for more than 25 years now.
- O In my different job experiences, I have worked with many type of databases, relational, analytics bi datawarehouse, nosql, document oriented etc ...
- O Working with the Mssql, Oracle, Mysql, Mariadb, Elasticsearch, Mongodb....
- O I'm deeply interested in all the aspects of data. Modeling, storage, optimization, documentation, monitoring and how we can get the most value out of our data.
- O I like to describe myself with these words: I am nobody, I am everybody.
- My resume : xxxxx

Pre-readings you may want?

- View the db analyzer short video to illustrate the results
- Navigate throught reporter sample project
- Read the db-analyser presentation kit for details of what will be provided
- Read the db-analyzer use case scenario to get the vision on the aspect where this could help

The proposition

- The proposition is simple, I offer my services as Database Administrator to proceed with analysis for how many databases we can do for a day.
- O At the end of the day you will have tangible analysis results that you'll be able to keep ,visuzalise and use how you see fit.
- O I will not ask any salary, fee, nothing. I only ask the company that requires my services to give a donation to a charity organization of their choice for at least 800\$ before I come in. Hopefully more, as this will be donation and company will have tax credit;-)

Why me, why this?

At the question why... I have given quite a though during the hours and the hours I put into this. I have no clear response to that, more a feeling, it was something I both wanted and needed to do. If I had to try to answer, I'll say simply, why not?

- Why not do something that could help, be good and inspire others?
- Why not take time and use it selflessly, for others?
- Why not have people involve so they also can be part of this?

I think that most of us are kind and more than willing to do good. We just need sometimes a gentle, little "kick" to motivate ourselves © This project proposes to be this gentle kick.

Who knows what will happen from there? Maybe not much or maybe way more that one could hope for. But in all cases, I will have plenty satisfaction just knowing that I have completed such a goal and kept a clear target in front of me over such a period of time.

Ubuntu: I am, because you are
